

Ministerial Foreword - Forestry in Scotland is a sector that we can be justly proud of.

1 - Introduction and Rationale for Providing Grant Support for Forestry

1. Do you agree that grant support for forestry should continue to be improved and developed as a discrete scheme within the overall package of land support?

Yes

Please explain your answer in the text box.:

2. Are there any changes that would allow for better complementarity between the forestry and agriculture funding options?

Yes

Please explain your answer in the text box.:

Do not separate agriculture and forestry grant support, agroforestry is the way forward, with trees integrated into farmland.

2 - Forests Delivering for Scotland's Climate Change Plan

3. How can the support package for forestry evolve to help tackle the climate emergency, to achieve net zero, and to ensure that our woodlands and forests are resilient to the future climate?

Please explain your answer in the text box.:

Provide support accessible to small or individual landowners, easy to understand, flexible in its application to small land areas or field margins, integrated with productive agricultural use of the land, so that we end up with a diverse patchwork of fields, hedgerows, woodlands in diverse ownership. Diversity in both planting and ownership builds resilience.

4. Private investment through natural capital and carbon schemes can make a valuable contribution to climate change. Do you agree that the grant support mechanism should have more flexibility to maximise the opportunities to blend private and public finance to support woodland creation,

Yes

Please explain your answer in the text box.:

5. How could the current funding package be improved to stimulate woodland expansion and better management across a wide range of woodland types, including native and productive woodlands?

Please explain your answer in the text box.:

The current funding values are out of date, for example the agroforestry livestock tree shelter grant works out at £9 per tree whereas when I last costed it it was £16 per tree. Ensure a mechanism to constantly link funding levels to actual costs is built in.

6. Do you agree that it should be a requirement of grant support that woodlands are managed to ensure that they become more resilient to the impacts of climate change and pests and disease?

Not sure

How can the grant scheme support this?:

It depends on the quality of the management advice used. A one size fits all approach using poorly researched fad ideas will have a widespread negative impact on woodland health.

3 - Integrating Woodlands on Farms and Crofts

7. Which of the following measures would help reduce the barriers for crofters and farmers wanting to include woodland as part of their farming business? Please select all that apply.

Better integration of support for woodland creation with farm support mechanisms, Knowing where to get reliable advice, Clearer guidance on grant options, Flexibility within options, Information on how current land use could continue with trees integrated throughout

Are there others not listed above?:

8. Establishing small woodlands can have higher costs. What specific mechanisms would better support small scale woodlands and woodland ownership?

Please explain your answer in the text box.:

Support for fencing small woodlands or livestock tree guards

4 - Forests Delivering for People and Communities

9. How can forestry grants better support an increase in easily accessible, sustainably managed woodlands in urban and peri-urban areas?

Please explain your answer in the text box.:

10. How can grant support for forestry better enable rural communities to realise greater benefits from woodland to support community wealth building?

Please explain your answer in the text box.:

11. How can the forest regulatory and grant processes evolve to provide greater opportunities for communities to be involved in the development of forestry proposals?

Please explain your answer in the text box.:

12. How can the forestry regulatory and grant processes evolve to ensure that there is greater transparency about proposals and the decisions that have been made on them?

Please explain your answer in the text box.:

13. Forestry grants have been used to stimulate rural forestry businesses by providing support with capital costs. Do you agree that this has been an effective measure to stimulate rural business?

Yes

a. How could this approach be used to support further forestry businesses?:

b. How could this approach be used to support further skills development?:

14. How could the FGS processes and rules be developed to encourage more companies and organisations to provide training positions within the forestry sector?

Please explain your answer in the text box.:

5 - Forests Delivering for Biodiversity and the Environment

15. The primary purpose of FGS is to encourage forestry expansion and sustainable forest management, of which a key benefit is the realisation of environmental benefits. How can future grant support better help to address biodiversity loss in Scotland including the regeneration and expansion of native woodlands?

Please explain your answer in the text box.:

Deer fencing has a negative impact on the free movement of many other non target species and should be discouraged.

16. Herbivore browsing and damage can have a significant impact on biodiversity loss and restrict regeneration. How could forestry grant support mechanisms evolve to ensure effective management of deer populations at:

Landscape scale?:

Control deer populations with effective skilled culling, making full use of the animals killed for meat.

Small scale mixed land use?:

Fund effective tree shelters for individual or very small groupd of trees.
